

Fast help thanks to the Porsche Macan S Fire Rescue Car

On no! There was an accident on the motorway

The rescue workers are on-the-go, supported by the new Porsche Macan S Fire Rescue Car. The practical sports car supports our firefighting heroes every day.

The vehicle offers supports with the ideal combination of performance and space. With its strong performance and excellent handling, it is the perfect vehicle for the emergency services.

Unfortunately, the police have not arrived yet, so the fire team are stepping in. Since the situation is quite serious, the fire chief takes control.

The following items can be used to create a road closure:

- Warning triangles
- Traffic cone
- Barrier tape, foil tape
- lighting equipment
- Vehicle technical equipment such as:
 - driving lights, low beam, hazard lights,
 - flashing lights, traffic warning systems,
 - Ambient lighting
 - Flashing and flashing lights

The chaos slowly calms down, and the ambulance crew was able to help those injured. Now, the road closure can be reduced.

However, a block can only lifted only by the police. Fortunately, they have now arrived and set up a cover.

Traffic can now continue while the emergency teams clear up the last few bits. A successful day for the rescue workers!
