

ZOO DOMINO

Before you print your domino cards, make sure you have some thick paper to make them sturdy. Print the cards on a colour printer.

Then, cut out the cards along the black line.

SETUP

First the cards have to be shuffled. Every player receives three cards. The rest of the cards are placed upside down on a stack.

THE GAME

The youngest player begins and places one of his cards facing up on the table. The game continues clockwise and every player puts down a matching card.

Only matching images may be placed next to each other (e.g. penguins to penguins). The players may place the cards on one of the ends of the card row.

If a player doesn't have a matching card, he has to draw a new one from the stack. If this card doesn't match either, it is the next player's turn.

END OF THE GAME

The player who has put down all their cards first will win the game.

If all players have cards left, but can't put them on the card row, the player with the fewest cards will win.
